TownshipLens - Flood visual review

23 Oct 2026 MYT | T-032 | PR #40 into DaVinci

Current UI source: ac734983dcb16cc3afd93cca5ddcbf684b563f86

20 full-size light/dark shots + 4 cinematic strips + 8 first-checkpoint images.

All images are embedded. No external image URL, browser sign-in or network is needed after download.

Indicative scenario, not a forecast. Water look is illustrative; depth not modelled.

The wheelchair route is partly unverified. Surau At Taqwa is an OSM candidate, not an official relief centre.

The mapped route is unchanged at River +3 m. No flood detour is invented.

Ambient traffic is still visible: integration awaits the shared traffic switch from Claude.

Captured at 1440 x 900 in the built Stylised app, with the real Elmina API.

Chromium / SwiftShader software rendering. This is not a hardware performance measurement.

Live model calls: 0. Frames are static evidence of the simulation, not a video.

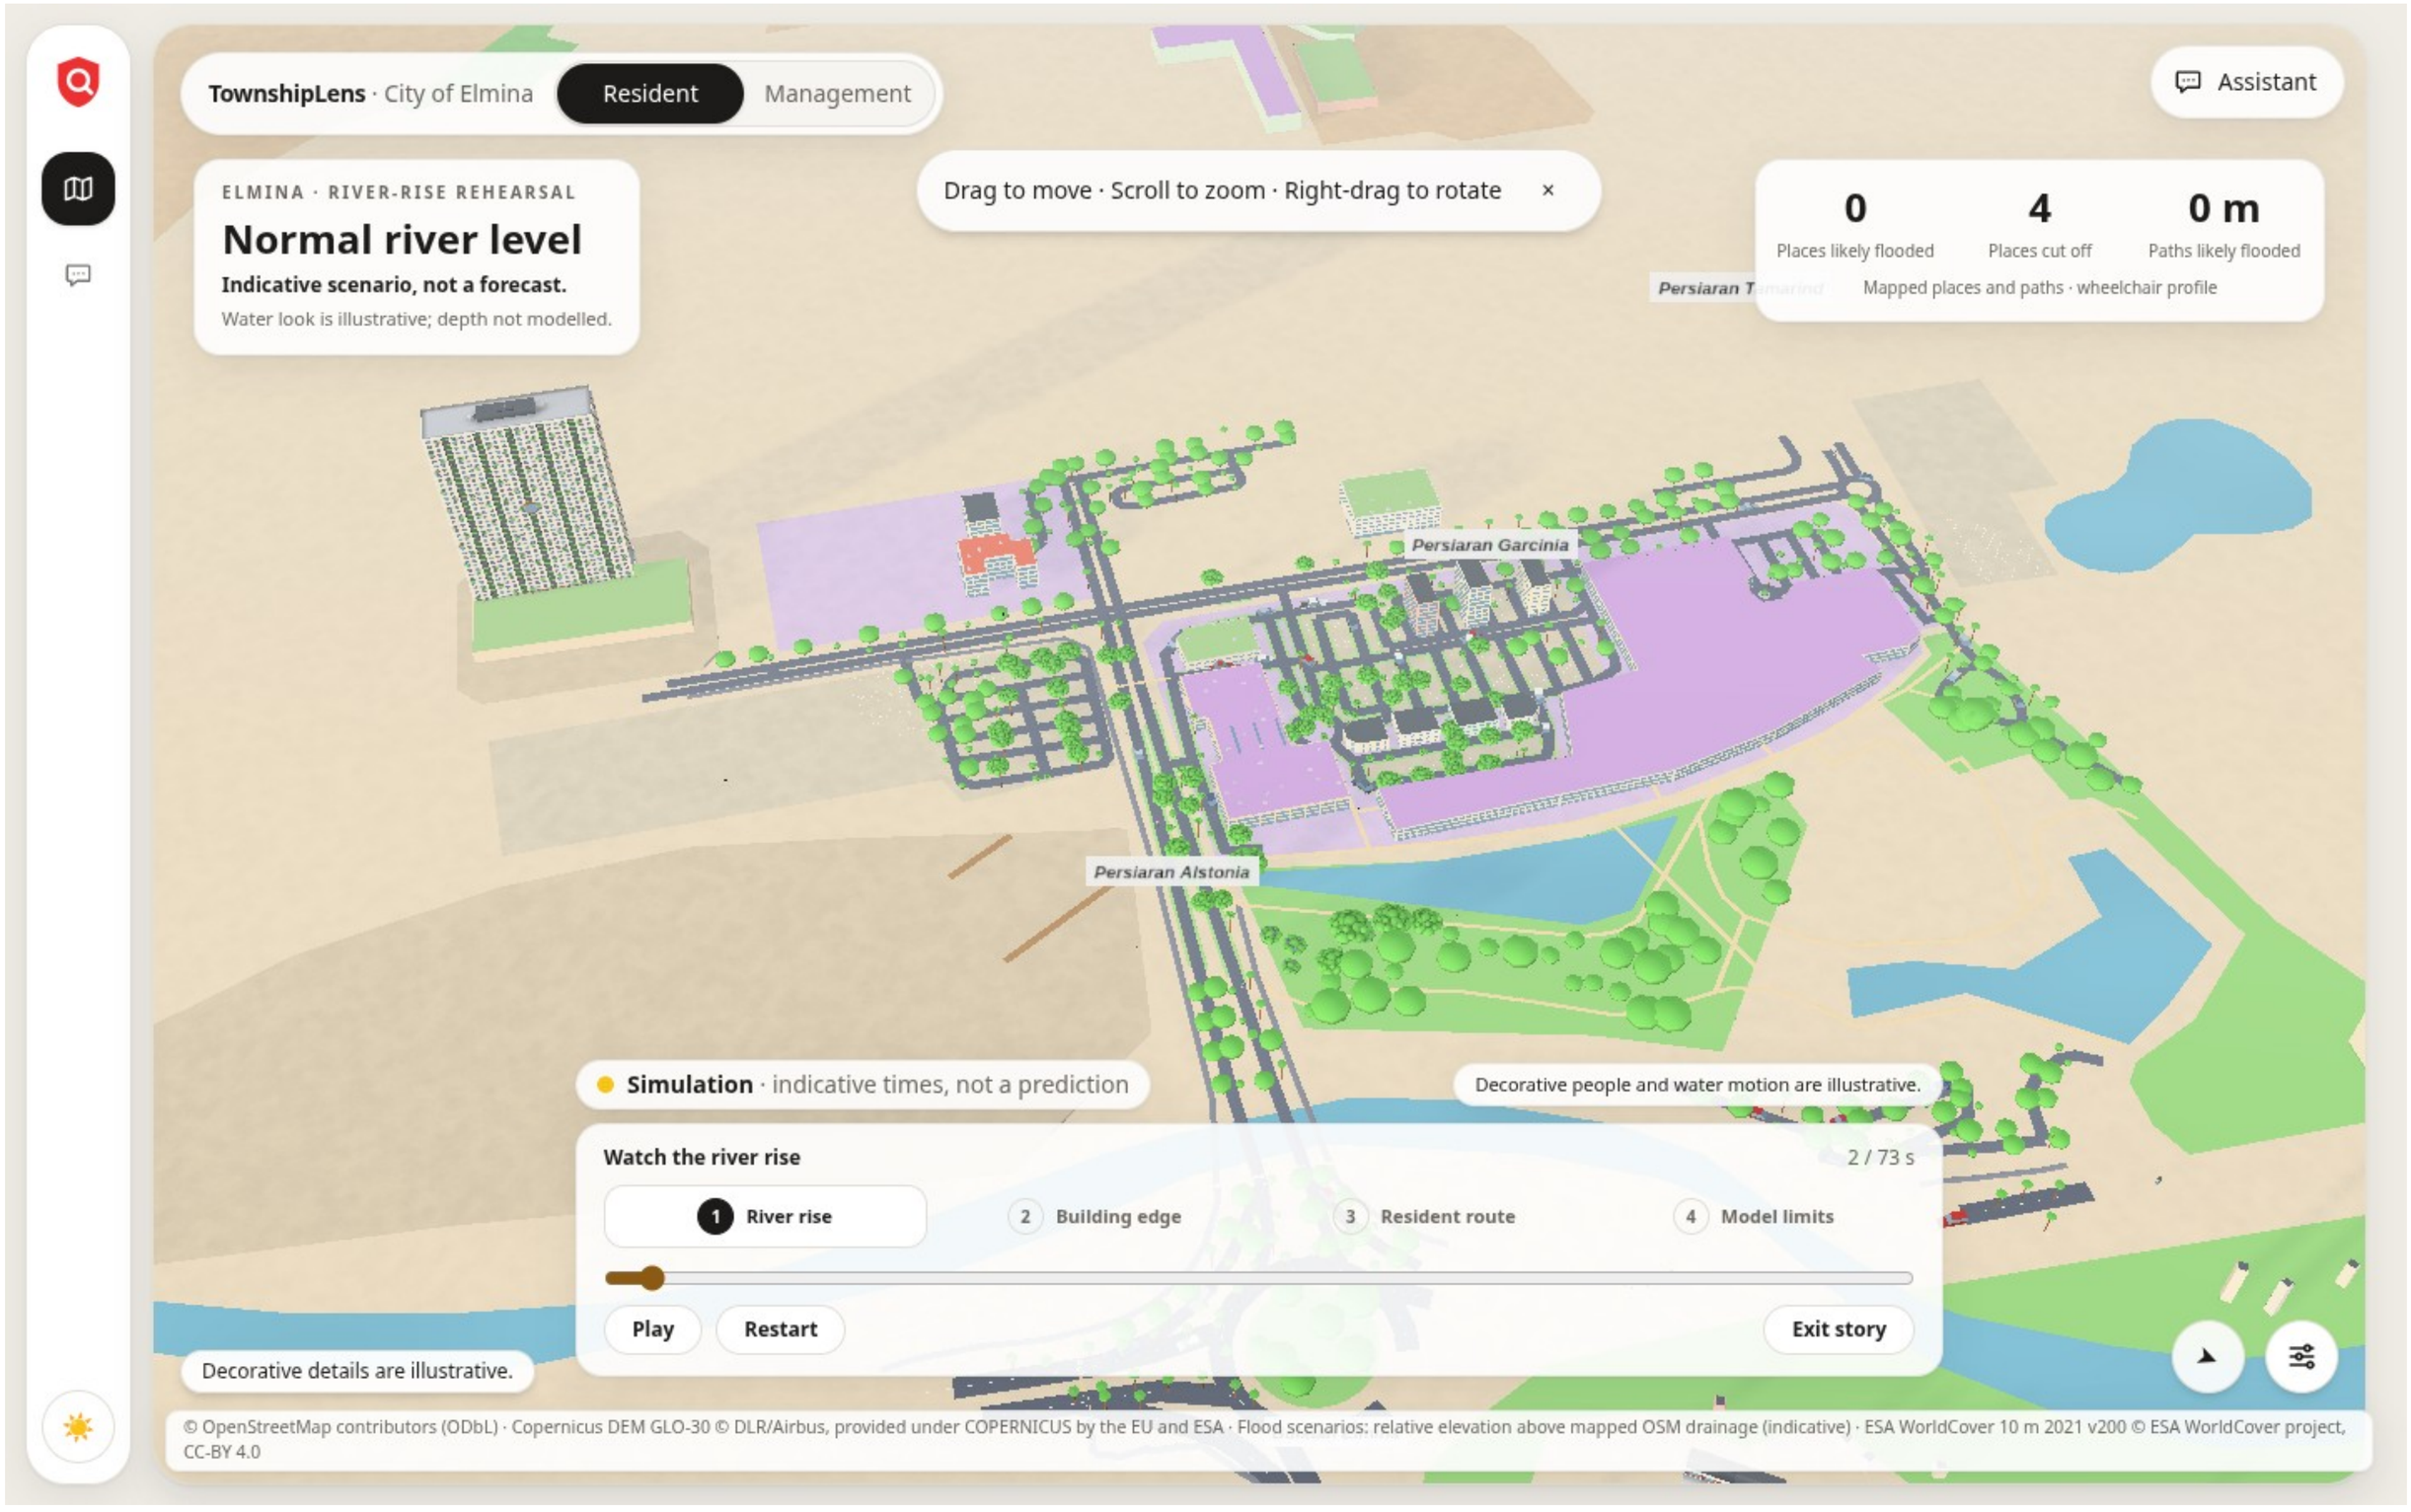

Pages 2-21: current cinematic, light/dark pairs.

Pages 22-25: current animation strips.

Pages 26-33: first rendering checkpoint (historical captures).
